SAMIN-ATLAS.IR

- **Ostrich leather is among the most precious and expensive types of leather used in the luxury leather industry. Only crocodile and alligator leather cost more. It is easily recognizable thanks to the evenly distributed follicles on its surface. It is deservedly considered one of the most resistant, soft and flexible leathers, and for these reasons it is loved by many designers who use it with pleasure in their collections.**
- **this leather is truly durable, soft and flexible. It adapts perfectly to any form of handbag, whether soft or rigid. It is also predisposed to dyeing and can assume many shades of color. In addition, ostrich skin is durable over time, thanks to its natural oils that keep it from drying out and that make it even softer, unlike other types of leather that do not have them.**

A1's area, A2's area, A3's area, A4's area are the most important area on skins.(Crown's area)

- 
- Samin Atlas Iranian has 4 main grades for sorting of ostrich leather and ostrich crust. each grade's percent in an order is consist of 5% grade A+, 15% grade A, 40% grade B, 30% grade C, 10% grade D.
 - Ostrich leather grading is based on defects or holes of crown in the hide. please check the image of crown or diamond. Grading of ostrich leather and ostrich crust is based on world's grading system and according to following :
 - A+ : ostrich skin has no defect or hole within crown or diamond. size is more than 16 square feet.
 - A : ostrich skin has no defect or hole within crown or diamond. size is between 13-16 square feet.
 - B : ostrich skin has few defects or hole within only one quarter of crown. defects are smaller than 10 millimeter.
 - C : ostrich skin has defect or hole within tow quarters of crown or diamond.
 - D : ostrich skin has defect or hole within three quarters of crown or diamond. defects are smaller than 40 millimeter.
